

Special Induction Heating Solution Incentives for Universities and Research Centers

Universities, research centers, and national laboratories can now take advantage of a special discount for Ambrell solutions. Induction heating is used by research centers and universities for an array of applications, including:

- Materials research/testing
- Nanoparticle research
- Levitation melting
- Hyperthermia
- Tensile testing
- Brazing and soldering applications

Induction offers fast, clean, and repeatable heating that is energy efficient, contributing to a more sustainable and eco-friendly approach to heating applications. Along with being used by universities and research centers, it's leveraged across numerous industries including aerospace, automotive, medical manufacturing, semiconductor, energy, and more.

Ambrell offers feasibility testing from THE LAB, so you know your application will work to your specifications and a properly sized system for your needs will be recommended.
